

# ABSTRACT OF THE DISCLOSURE

An information processing apparatus for making a bookbinding setup for a document includes a cover page determination unit for determining pages to be imposed  
5 on a cover from input data of a plurality of pages, a cover imposing processing unit for executing an imposing process of cover pages on the basis of data of the pages determined by the cover page determination unit, and a bookbinding imposing processing unit for  
10 executing an imposing process of running text pages on the basis of data of the remaining pages which are not imposed on the cover pages by the cover imposing processing unit, thus allowing an information process for making a bookbinding setup that the user wants.
